36—Percentage of holders affected by shock on crops, by type of shock and zone	32
37—Percent of produce lost by holders due to shock (crops), by zone	32
38—Percentage of holders affected by shocks on animals	33
39—Percentage of animals lost due to shock	33
40—Percent of household members reporting illness and the effects of illness on productive activities in the last two weeks	34
41—Symptoms of illnesses reported by holders (percent of holders)	34

presented⁴. Cross breed chicken were noted to graze on public land (70 percent), feed on grass (62 percent), feed on dried crop residues (41 percent) and also depend on grains and left over food 26 and 20 percent respectively. About 85 percent of ducks were offered left-over food and 30 percent were fed with grains. Local chicken likewise depend mainly on grains and household left-over food as their source of feed (65 and 62 percent respectively) Exotic chickens on the other hand were fed with grains (62 percent), compound feed (41 percent) and in some cases household left-over food.

For small ruminants, sheep and goats, 51 to 68 percent were fed on public grazing lands and 12 to 29 percent on owners' land. Both exotic and local pigs were provided with leftover food for their up keep and these involved 93 and 69 percent for exotic and local pigs respectively.

Most cattle and donkeys were fed by grazing on public and own fields in addition to grass cut for them. About 77 percent of the donkeys were also fed on household left-overs.

⁴ The sums add to more than 100 because a particular livestock can feed on multiple sources.
